CCNA - CLASS ON DEMAND LEADS THE WAY TO HIGHER CERTIFICATIONS Innovative product offers a more flexible and affordable starting point for IT professionals

Today's information technology engineers are in greater demand than ever before. Like many professions, IT engineers must always learn, advance, and increase their knowledge. Companies depend on them to be on the cutting-edge of the industry. However, with the challenging economic climate, companies are eliminating training and travel budgets. Engineers are looking for innovative to get the training necessary that leads to higher certifications.

The newest and most ground-breaking training option has recently been released by CCBOOTCAMP. Dawn Tesar, Director of Marketing for CCBOOTCAMP, says, "We talked to thousands of engineers world-wide when we were developing this new product. We believe that the iCOD® – Class on Demand addresses many of the concerns we heard." The CCNA iCOD® – Class on Demand gives these engineers an affordable, flexible and portable option to traditional or even online courses.

IT engineers who plan to work toward the highest Cisco® Expert level certification, generally begin with a CCNA, Cisco® Certified Network Associate certification. This is the newest course now available on the iCOD®. Engineers can now have all of the benefits of a traditional, week long; instructor led boot camp without sacrificing time away from work or family. Employers are excited too because engineers can now get the same high level of training at a reduced cost, no travel required.

The CCNA iCOD® comes on an 8GB iPod®. The CCNA course includes over 40 hours of classroom instruction that uses lecture and labs. Students get the same Cisco® CCNA course curriculum and lab guides as they would in a traditional training course. The material included is specifically designed to prepare the student for the CCNA 640-802 exam. Also included for the student's success is 40 hours of virtual rack time. This allows the student to thoroughly and effectively practice what is being learned. Students can easily review trouble areas as many times as necessary. This, along with the dedicated instructor mentoring via www.routerie.com, ensures that all concepts are completely understood by the student.

CCBOOTCAMP expects to release additional Cisco® courses in the iCOD® format to cover all levels from CCENT through CCIE in the coming months.
