

ICND1 v1.1

Interconnecting Cisco Networking Devices - Part 1, Volume 1

Course Introduction

- Overview
 - Learner Skills and Knowledge
- Course Goal and Objectives
- Course Flow
- Additional References
 - Cisco Glossary of Terms
- Your Training Curriculum
 - Training Curriculum

Building a Simple Network

- Overview
 - Module Objectives

Exploring the Functions of Networking

- Overview
 - Objectives
- What is a Network?
- Common Physical Components of a Network
- Interpreting a Network Diagram
- Resource-Sharing Functions and Benefits
- Network User Applications
- Impact of User Applications on the Network
- Characteristics of a Network
 - Logical vs. Physical Topologies
 - Logical Topologies
 - Physical Topologies
- Bus Topology
- Star and Extended-Star Topologies
 - Star Topology
 - Extended-Star Topology
- Ring Topologies
 - Single-Ring Topology
 - Double-Ring Topology
- Mesh and Partial-Mesh Topologies
 - Full-Mesh Topology
 - Partial-Mesh Topology

CCBOOTCAMP

ICND1 v1.1

Connection to the Internet

Summary

Securing the Network

Overview

Objectives

Need for Network Security

Balancing Network Security Requirements

Adversaries, Adversary Motivations, and Classes of Attack

Classes of Attack

Mitigating Common Threats

Physical Installations

Reconnaissance Attacks

Access Attacks

Password Attacks

Summary

References

Understanding the Host-to-Host Communications Model

Overview

Objectives

Understanding Host-to-Host Communications

OSI Reference Model

OSI Model Layers and Their Functions

Layer 1: The Physical Layer

Layer 2: The Data Link Layer

Layer 3: The Network Layer

Layer 4: The Transport Layer

Layer 5: The Session Layer

Layer 6: The Presentation Layer

Layer 7: The Application Layer

Encapsulation and De-Encapsulation

Encapsulation

Example: Sending a Package Through a Postal Service

De-Encapsulation

Example: Receiving a Package

Peer-to-Peer Communication

TCP/IP Suite

Summary

CCBOOTCAMP

ICND1 v1.1

Understanding the TCP/IP Internet Layer

Overview

Objectives

Internet Protocol

Example: Delivering a Letter Through a Postal Service

IP Addressing

IP Address Fields

IP Address Classes

Class A

Class B

Class C

Reserved IP Addresses

Network Address

Directed Broadcast Address

Local Broadcast Address

Local Loopback Address

Autoconfiguration IP Addresses

Network ID

Host ID

Public and Private IP Addresses

Public IP Addresses

Private IP Addresses

Dynamic Host Configuration Protocol

Domain Name System

Using Common Host Tools to Determine the IP Address of a Host

Summary

Understanding the TCP/IP Transport Layer

Overview

Objectives

Transport Layer Functions

Example: UDP- Sending Regular Mail

Example: TCP- Sending Certified Mail

Session Multiplexing

Identifying the Applications

Segmentation

Flow Control

Connection-Oriented Transport Protocol

Reliability

CCBOOTCAMP

ICND1 v1.1

- Reliable vs. Best-Effort
 - Reliable (Connection-Oriented)
 - Best-Effort (Connectionless)
- User Datagram Protocol
 - Example: Sending Advertising Flyers
- Transmission Control Protocol
- TCP Header
- TCP/IP Applications
- Passing Network to Transport
- Passing Transport to Applications
 - Well-known Ports
 - Registered Ports
 - Dynamically Assigned Ports
- Establishing a Connection with a Peer System
- Three-Way Handshake
- Flow Control
 - Acknowledgement
 - Windowing
- TCP Acknowledgement
- Windowing
 - Fixed Windowing
 - Example: Throwing a Ball
- TCP Sliding Windowing
 - Maximize Throughput
 - Global Synchronization
- TCP Sequence Number and Acknowledgement Numbers
- Summary

Exploring the Packet Delivery Process

- Overview
 - Objectives
- Layer 1 Devices and Their Function
- Layer 2 Devices and Their Function
- Layer 2 Addressing
- Layer 3 Devices and Their Function
- Layer 3 Addressing
- Mapping Physical Addressing to Network Addressing
- ARP Table
- Host-to-Host Packet Delivery

CCBOOTCAMP

ICND1 v1.1

Function of the Default Gateway

Using Common Host Tools to Determine the Path Between Two Hosts Across a Network

Summary

Understanding Ethernet

Overview

Objectives

Definition of a LAN

Examples: A Small Office LAN and an Enterprise LAN

Components of a LAN

Functions of a LAN

How Large is a LAN?

Ethernet

Ethernet LAN Standards

LLC Sublayer

MAC Sublayer

Ethernet Frames

Ethernet Frame Addressing

Ethernet Addresses

MAC Addresses and Binary-Hexadecimal Numbers

Summary

Connecting to an Ethernet LAN

Overview

Objectives

Ethernet Network Interface Cards

Ethernet Media and Connection Requirements

Connection Media

UTP Implementation

Summary

Module Summary

References

Module Self-Check

Module Self-Check Answer Key

Ethernet LANs

Overview

Module Objectives

ICND1 v1.1

Understanding the Challenges of Shared LANs

- Overview
 - Objectives
- Ethernet LAN Segments
- Extending a LAN Segment
- Collisions
- Collision Domains
- Role of CSMA/CD in Ethernet
- Summary

Solving Network Challenges with Switched LAN Technology

- Overview
 - Objectives
- Typical Causes of Network Congestion
- Bridges – Early Solutions to Network Congestion
- How Switches Segment the Ethernet Network
- Switches
- Switches vs. Bridges
- Switching in Action
- LANs Using Switched Technology
- Summary

Exploring the Packet Delivery Process

- Overview
 - Objectives
- Layer 2 Addressing
- Layer 3 Addressing
- Host-to-Host Packet Delivery
- Summary

Operating Cisco IOS Software

- Overview
 - Objectives
- Cisco IOS Software Features and Functions
- Configuring Network Devices
- External Configuration Sources
- Cisco IOS Command-Line Interface Functions
- Entering the EXEC Modes
- Keyboard Help in the CLI
- Enhanced Editing Commands

CCBOOTCAMP

ICND1 v1.1

Command History

Summary

Starting a Switch

Overview

Objectives

Physical Startup of the Catalyst Switch

Switch LED Indicators

Viewing Initial Bootup Output from the Switch

Logging in to the Switch

Configuring a Switch from the Command Line

Showing the Switch Initial Startup Status

MAC Address Table Management

Summary

Understanding Switch Security

Overview

Objectives

Physical and Environmental Threats

Configuring Password Security

Configuring the Login Banner

Telnet vs. SSH Access

Port Security Configuration

Securing Unused Ports

Summary

Maximizing the Benefits of Switching

Overview

Objectives

Microsegmentation

Example: Getting a Dedicated On-Ramp

Duplex Communication

Half Duplex

Full Duplex

Example: Data Conversations

Duplex Interface Configuration

Example: Showing Duplex Options

The Need for Different Media Rates in an Enterprise Network

Physical Redundancy in an Ethernet LAN

Example: Loops in a Switched Network

Loop Resolution with Spanning Tree Protocol

CCBOOTCAMP

ICND1 v1.1

Summary

Troubleshooting Switch Issues

Overview

Objectives

Using a Layered Approach

Identifying and Resolving Common Port Issues

Identifying and Resolving Media Issues

Identifying and Resolving Common Configuration Issues

Summary

Module Summary

Module Self-Check

Module Self-Check Answer Key

Wireless LANs

Overview

Module Objectives

Exploring Wireless Networking

Overview

Objectives

Business Case for WLAN Services

Differences Between WLANs and LANs

RF Transmission

Organizations that Define WLANs

ITU-R Local FCC Wireless

IEEE 802.11 Standards Comparison

Wi-Fi Certification

Summary

Understanding WLAN Security

Overview

Objectives

WLAN Security Threats

Mitigating Security Threats

Evolution of WLAN Security

Wireless Client Association

How 802.1X Works on WLANs

WPA and WPA2 Modes

Enterprise Mode

CCBOOTCAMP

ICND1 v1.1

Personal Mode

Summary

Implementing a WLAN

Overview

Objectives

IEEE 802.11 Topology Building Blocks

BSA Wireless Topology

Wireless Topology Data Rates

Access Point Configuration

Steps to Implement a Wireless Network

Wireless Clients

Wireless Troubleshooting

Summary

VoIP Requirements

Overview

Objectives

VoIP Requirements in Switched Networks

Summary

Module Summary

Module Self-Check

Module Self-Check Answer Key

ICND1 v1.1

Interconnecting Cisco Networking Devices - Part 1, Volume 2

LAN Connections

Overview

Module Objectives

Exploring the Functions of Routing

Overview

Objectives

Routers

Path Determination

Routing tables

Routing Table Information

Routing Update Messages

Static, Dynamic, Directly Connected, and Default Routes

Dynamic Routing Protocols

Routing Metrics

Routing Methods

Summary

Understanding Binary Basics

Overview

Objectives

Decimal and Binary Systems

Powers of 2

Least Significant Bit and Most Significant Bit

Base-2 Conversion System

Decimal and Binary Numbers Chart

Decimal-to-Binary Conversion

Binary-to-Decimal Conversion

Summary

Constructing a Network Addressing Scheme

Overview

Objectives

Subnetworks

Two-Level and Three-Level Addresses

Subnet Creation

How End Systems Use Subnet Masks

How Routers Use Subnet Masks

ICND1 v1.1

Mechanics of Subnet Mask Operation

Octet Values of a Subnet Mask

Computing Usable Subnetworks and Hosts

Computing Hosts for a Class C Subnetwork

Computing Hosts for a Class B Subnetwork

Computing Hosts for a Class A Subnetwork

Applying Subnet Mask Operation

Determining the Network Addressing Scheme

Class C Example

Class B Example

Class A Example

Summary

Starting a Cisco Router

Overview

Objectives

Initial Startup of a Cisco Router

Initial Setup of a Cisco Router

Logging into the Cisco Router

Showing the Router Initial Startup Status

Summary

Configuring a Cisco Router

Overview

Objectives

Cisco Router Configuration Modes

Configuring a Cisco Router from the CLI

Configuring Cisco Router Interfaces

Configuring the Cisco Router IP Address

Verifying the Interface Configuration

Summary

Exploring the Packet Delivery Process

Overview

Objectives

Layer 2 Addressing

Layer 3 Addressing

Host-to-Host Packet Delivery

Using the show ip arp Command

Using Common Cisco IOS Tools

Summary

CCBOOTCAMP

ICND1 v1.1

Understanding Cisco Router Security

Overview

Objectives

Physical and Environmental Threats

Configuring Password Security

Configuring the Login Banner

Telnet and SSH Access

Summary

Using Cisco SDM

Overview

Objectives

Cisco SDM Overview

Cisco SDM User Interface

Configuring Your Router to Support Cisco SDM

Start Cisco SDM

The More Link

Configuration Overview

Cisco SDM Wizards

Summary

Using a Cisco Router as a DHCP Server

Overview

Objectives

Understanding DHCP

DHCPDISCOVER

DHCPOFFER

DHCPREQUEST

DHCPPACK

Using a Cisco Router as a DHCP Server

Using a Cisco SDM to Enable the DHCP Server Function

Monitoring DHCP Server Functions

Summary

Accessing Remote Devices

Overview

Objectives

Establishing a Telnet or SSH Connection

Telnet

Secure Shell

CCBOOTCAMP

ICND1 v1.1

- Suspending and Resuming a Telnet Session
- Closing a Telnet Session
- Alternate Connectivity Tests
- Summary
- Module Summary
- Module Self-Check
 - Module Self-Check Answer Key

WAN Connections

- Overview
 - Module Objectives

Understanding WAN Technologies

- Overview
 - Objectives
 - What is a WAN?
 - Why Are WANs Necessary?
 - How is a WAN Different from a LAN?
 - WAN Access and the OSI Reference Model
 - WAN Devices
 - WAN Cabling
 - Role of Routers in WANs
 - WAN Data-Link Protocols
 - Metro Ethernet
 - WAN Communication Link Options
 - Private WAN Connection Options
 - Public WAN Connection Options
 - Last Mile and Long Range WAN Technologies
- Summary

Enabling the Internet Connection

- Overview
 - Objectives
 - Packet-Switched Communication Links
 - Digital Subscriber Line
 - DSL Types and Standards
 - DSL Considerations
 - Cable
 - Global Internet: The Largest WAN
 - Obtaining an Interface Address from a DHCP Server

CCBOOTCAMP

ICND1 v1.1

Introducing NAT and PAT

Differences Between NAT and NAT Overload

Translating Inside Source Addresses

Example: Translating Inside Source Addresses

Example: Overloading an Inside Global Address

Configuring the DHCP Client and PAT

Verifying the DHCP Client Configuration

Verifying the NAT and PAT Configuration

Summary

Enabling Static Routing

Overview

Objectives

Routing Overview

Static and Dynamic Route Comparison

When to Use Static Routes

Static Route Configuration

Example: Static Routes

Example: Configuring Static Routes

Default Route Forwarding Configuration

Static Route Configuration Verification

Example: Verifying the Static Route Configuration

Summary

Configuring Serial Encapsulation

Overview

Objectives

Circuit-Switched Communication Links

Public Switched Telephone Network

Point-to-Point Communication Links

Bandwidth

Point-to-Point Communication Considerations

High-Level Data Link Control Protocol

Verifying Serial HDLC Encapsulation

Example: Verifying HDLC Encapsulation Configuration

Point-to-Point Protocol

PPP Layered Architecture

Example: PPP Configuration

Serial PPP Encapsulation Configuration Verification

Summary

CCBOOTCAMP

ICND1 v1.1

Enabling RIP

Overview

Objectives

Dynamic Routing Protocol Overview

Features of Dynamic Routing Protocols

Example: Administrative Distance

Classless vs. Classful Routing

Distance Vector Route Selection

Example: Distance Vector Routing Protocols

Example: Sources of Information and Discovering Routes

RIP Features

RIPv1 and RIPv2 Comparison

Dynamic Routing Configuration Tasks

RIP Configuration

Example: RIP Configuration

RIP Configuration Verification

Example: Verifying the RIP Configuration

RIP Configuration Troubleshooting

Example: Debug ip rip Command

Summary

Module Summary

Module Self-Check

Module Self-Check Answer Key

Network Environment Management

Overview

Module Objectives

Discovering Neighbors on the Network

Overview

Objectives

Creating a Network Map of the Environment

Cisco Discovery Protocol

Information Obtained with Cisco Discovery Protocol

Link Layer Discovery Protocol

Implementation of Cisco Discovery Protocol

Using the show cdp neighbors Command

Monitoring and Maintaining Cisco Discovery Protocol

CCBOOTCAMP

ICND1 v1.1

Summary

Managing Cisco Router Startup and Configuration

Overview

Objectives

Internal Router Components

Stages of the Router Power-On Boot Sequence

How a Device Locates and Loads Cisco IOS Image and Configuration Files

Configuration Register

Summary

Managing Cisco Devices

Overview

Objectives

Cisco IOS File System and Devices

Managing Cisco IOS Images

Cisco IOS copy Command

Managing Device Configuration Files

Using show and debug Commands on Cisco Devices

Summary

Module Summary

Module Self-Check

Module Self-Check Answer Key

Interconnecting Cisco Networking Devices

Lab Guide

Overview

This guide presents instructions and other information concerning the lab activities for this course. You can find the solutions in the Lab Activity Answer Key.

Outline

This guide includes these activities:

- Lab 1-1: Using Windows Applications as Network Tools
- Lab 1-2: Observing the TCP Three-Way Handshake
- Lab 1-3: Observing Extended PC Network Information
- Lab 2-1: Connecting to Remote Lab Equipment
- Lab 2-2: Performing Switch Startup and Initial Configuration
- Lab 2-3: Enhancing the Security of Initial Switch Configuration
- Lab 2-4: Operating and Configuring a Cisco IOS Device
- Lab 4-1: Converting Decimal to Binary, and Binary to Decimal
- Lab 4-2: Classifying Network Addressing
- Lab 4-3: Computing Usable Subnetworks and Hosts
- Lab 4-4: Calculating Subnet Masks
- Lab 4-5: Performing Initial Router Startup
- Lab 4-6: Performing Initial Router Configuration
- Lab 4-7: Enhancing the Security of Initial Router configuration
- Lab 4-8: Using Cisco SDM to Configure DHCP Server Function
- Lab 4-9: Managing Remote Access Sessions
- Lab 5-1: Connecting to the Internet
- Lab 5-2: Connecting to the Main Office
- Lab 5-3: Enabling Dynamic Routing to the Main Office
- Lab 6-1: Using Cisco Discovery Protocol
- Lab 6-2: Managing and Router Startup Options
- Lab 6-3: Managing Cisco Devices
- Lab 6-4: Confirming the Reconfiguration of the Branch Network
- Answer Key
